

MCforNC is a nonprofit consulting firm providing consulting services to other nonprofits. Our mission is to provide students with relevant work experience while helping our nonprofit community be sustainable.

Technology Assessment and Planning

Strategically planning and budgeting for technology can help your organization operate more efficiently while lowering costs.

- Are you using valuable time and resources to maintain and upkeep your data from regular processes?
- Are you overpaying for software that doesn't meet your needs or that is too sophisticated for your needs?
- Are you able to quickly train new staff, clients, and volunteers to use your technology?
- Are you considering to make a major change in your software, database, or technology?

MCforNC can help you develop or re-develop a customized strategic technology plan to ensure your organization's technology infrastructure is exactly aligned to help you meet your needs and reach your goals. Because we customize our solution for each of our clients, you can rest assured that our solution will be in harmony with your organization's budget and staff expertise.

How does the process work?

Conduct a detailed evaluation of all of your current technology and your custom needs

Perform an extended research of potential solutions for each technology needed

Present a final analysis report with an immediately implementable solution
